

SAMUEL'S MAIN PLAN

Simple order-by-order checklist

Body transformation | French | IT career

DO ONE STEP

FINISH IT

THEN MOVE ON

Your three daily priorities

☐ Health: sleep, food, movement

☐ French: 30 minutes

☐ IT: one focused study or project block

Start date:

Current weight:

PGWP expiry confirmed: ☐ Yes ☐ No

This plan improves your chances. It cannot guarantee a job, a specific body, a French score, or permanent residence.

Use this document from left to right and from Step 0 to Step 7. Do not try to complete every project in the first week.

0

Set up Week 0

Complete this page once before beginning the regular weekly routine.

Today

- ☐ Create a folder called Samuel-Main-Plan
- ☐ Create a note called Week 0 Baseline
- ☐ Record weight, waist, photos, sleep, and current steps
- ☐ Write your exact diploma name from your transcript
- ☐ Write your current work schedule and commute
- ☐ Confirm current leg-injury status
- ☐ List your home workout equipment
- ☐ List food restrictions, allergies, disliked foods, and food budget

Do not buy all certifications now

- ☐ Confirm your study time and certification budget
- ☐ Create or organize GitHub account Shine0078
- ☐ Create a repository called IT-Support-Portfolio
- ☐ Create a simple job-search spreadsheet or note

When every box above is complete, go to Step 1.

1

Build the weekly routine

Repeat this routine every week. The routine comes before the difficult certifications.

Every workday

- ☐ Protect 7.5-9 hours of sleep
- ☐ Eat a protein source at each meal
- ☐ Complete 30 minutes of French
- ☐ Complete 30-60 minutes of IT study or a project
- ☐ Pack food before leaving for work

Every week

- ☐ Complete 2-3 safe home strength sessions
- ☐ Complete 2-3 walks or easy cardio sessions
- ☐ Use your seven-day average weight
- ☐ Prepare two repeatable meals
- ☐ Review ten IT job postings
- ☐ Submit at least five targeted applications once your resume is ready

Starting body targets

- ☐ Calories: approximately 2,350-2,550 until your data supports a change
- ☐ Protein: approximately 160-180 g/day
- ☐ Steps: current baseline plus about 1,000, adjusted for warehouse work
- ☐ Stop demanding leg exercise if pain, numbness, or worsening symptoms appear

When this routine works for two weeks, go to Step 2.

2

Complete SC-900 and Project 1

Time target: Month 1. This is your first certification and first portfolio project.

Certification: Microsoft SC-900

- ☐ Complete the official SC-900 learning path
- ☐ Write one page of notes on Entra ID, MFA, RBAC, Defender, Sentinel, and Purview
- ☐ Take practice assessments
- ☐ Reach your readiness target
- ☐ Book and pass the exam
- ☐ Save the credential link and add it to your resume and LinkedIn

Project 1: Help-desk ticketing system

- ☐ Choose GLPI, Zammad, Jira Service Management, or a simple support app
- ☐ Create ten realistic tickets
- ☐ Add priority, SLA, escalation, resolution, and closure
- ☐ Write one knowledge-base article
- ☐ Publish screenshots and a README on GitHub
- ☐ Practice explaining the project in 60 seconds

After SC-900 and Project 1 are complete, begin applying for entry-level support jobs and go to Step 3.

3

Study CCNA and complete Projects 2-5

Time target: Months 2-3. CCNA is your main technical foundation.

Certification: Cisco CCNA 200-301

- ☐ Study network fundamentals and subnetting
- ☐ Build Packet Tracer networks
- ☐ Practice VLANs, DHCP, DNS, routing, and ACLs
- ☐ Troubleshoot at least five failures
- ☐ Take practice tests
- ☐ Book the exam only when ready
- ☐ Save the credential link and update applications

Projects to finish in order

- ☐ Project 2: Windows 11 troubleshooting knowledge base
- ☐ Project 3: PowerShell support toolkit
- ☐ Project 4: Small-business Packet Tracer network
- ☐ Project 5: Active Directory and Entra identity lab

Application focus

- ☐ Help desk technician
- ☐ Service desk analyst
- ☐ Technical support analyst
- ☐ Desktop or systems-support representative
- ☐ Junior network-support or NOC technician

When CCNA and Projects 2-5 are documented, go to Step 4.

4

Complete SAL1 and Projects 6-8

Time target: Months 4-5. This is the defensive-security stage.

Certification: TryHackMe SAL1

- ☐ Complete the SOC Level 1 path
- ☐ Practice alert triage and evidence collection
- ☐ Write incident reports
- ☐ Practice phishing, endpoint, network, and SIEM investigations
- ☐ Complete the simulator assessment
- ☐ Save the certificate and add your casebook to GitHub

Projects to finish in order

- ☐ Project 6: SOC alert-triage casebook
- ☐ Project 7: Phishing and email-security investigation lab
- ☐ Project 8: Vulnerability-management lab using authorized local VMs

Security job focus

- ☐ Junior SOC analyst
- ☐ Security monitoring analyst
- ☐ Cybersecurity support analyst
- ☐ Managed-security-service analyst
- ☐ Continue applying to help desk and NOC roles as your entry route

When SAL1 and Projects 6-8 are documented, go to Step 5.

5

Add SC-200 only if you are targeting Microsoft SOC roles

Time target: Month 5-6. Do not start this before your fundamentals and SAL1 work are solid.

Certification: Microsoft SC-200

- ☐ Learn Microsoft Sentinel and Defender
- ☐ Practice KQL queries
- ☐ Build an alert, investigation, and escalation workflow
- ☐ Write three incident reports
- ☐ Complete a Microsoft security operations lab
- ☐ Take practice assessments
- ☐ Book the exam only when ready
- ☐ Record the annual renewal date

Decision gate

- ☐ I want SOC/security operations more than general IT support
- ☐ I can explain Windows, networking, identity, and logs
- ☐ I have completed SAL1 or equivalent practical work
- ☐ I have a Sentinel/Defender project to show an employer

If most boxes are not checked, keep applying for support/NOC roles and delay SC-200.

When you are ready, go to Step 6.

Time target: Months 6-7. This is a later cloud and application-security expansion stage.

Certification: Google Cloud Associate Cloud Engineer

- ☐ Choose a specific Google Cloud project
- ☐ Learn IAM, VM deployment, networking, logs, monitoring, and budgets
- ☐ Use cost alerts and delete unused resources
- ☐ Build the cloud operations project
- ☐ Take practice tests
- ☐ Book the exam only when you have enough hands-on practice
- ☐ Save the credential link and add it to your resume

Projects to finish

- ☐ Project 9: Google Cloud operations project
- ☐ Project 10: Authorized OWASP Juice Shop and PortSwigger web-security lab
- ☐ Write a professional security report for the web lab
- ☐ Never test a real target without written permission

Optional credentials

- ☐ Defer CCDL1 because it overlaps with SAL1
- ☐ Defer Burp Suite Certified Practitioner until web security is your chosen specialization
- ☐ Use CS50 for learning and projects, not as a core hiring credential
- ☐ Do not return Google Data Analytics to this IT-support plan

When this page is complete, continue the weekly cycle on the next page.

7

Apply, interview, and review every week

This step never ends. Keep it active while studying every certification.

Every week

- ☐ Review ten relevant Ontario job postings
- ☐ Submit five to ten tailored applications
- ☐ Contact two IT professionals or recruiters
- ☐ Practice one technical-support interview
- ☐ Practice one behavioural answer using Situation, Task, Action, Result
- ☐ Improve one resume or LinkedIn section
- ☐ Add one completed project or lab result to your evidence bank

Weekly review

- ☐ Average weight: _____
- ☐ Waist: _____
- ☐ Steps: _____
- ☐ Workouts: _____
- ☐ Protein and calorie adherence: _____
- ☐ Sleep and energy: _____
- ☐ French study minutes and score: _____
- ☐ IT study minutes and project: _____
- ☐ Applications and interviews: _____
- ☐ Main obstacle: _____
- ☐ One change for next week: _____

Weekly rule

- ☐ If the plan is too difficult, reduce the task; do not abandon the whole plan
- ☐ If weight loss is slow for two weeks with strong adherence, adjust modestly
- ☐ If energy, sleep, strength, or injury worsens, schedule recovery and reassess
- ☐ Do not start a new certification until the current stage has evidence of completion

Your simple seven-month order

Use this as the one-page overview. The detailed instructions are on the previous pages.

When	Main task	Projects	Done
Week 0	Set up, baseline, equipment, schedule	Create GitHub portfolio	☐
Month 1	SC-900	Project 1	☐
Months 2-3	CCNA	Projects 2-5	☐
Months 4-5	SAL1	Projects 6-8	☐
Months 5-6	SC-200 if targeting Microsoft SOC	Security operations lab	☐
Months 6-7	Google Cloud ACE if cloud support is the target	Projects 9-10	☐
Every week	French, health, applications, review	Update evidence bank	☐

The only action you need to do today

- ☐ Complete Step 0
- ☐ Create Project 1
- ☐ Study one SC-900 lesson
- ☐ Do 30 minutes of French
- ☐ Protect your sleep

ASSESS -> PLAN -> EXECUTE -> TRACK -> REVIEW -> ADJUST -> REPEAT
